DETAILED ACTION

Requesting Continued Examination (RCE)

1. Receipt is acknowledged of the Requesting Continued Examination (RCE) filed 23 November 2005.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the biometric data acquisition circuit for acquiring biometric data, a speech input circuit for entering speech signals, circuitry for presenting non-speech information, an authentication circuit for authenticating a transaction, a controllable pattern display and a controller adapted to control the pattern changing of the display must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement-drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be

Art Unit: 2876

labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Election/Restrictions

3. Claims 139-167, 188, 190-198, 203-205, 235-251, 262-263, 265-278, 280-291, 293-299 are generic to the following disclosed patentably distinct species: a smart card having low frequency circuit and/or high frequency circuit for handling transmission of information associated with the card memory and antenna; a smart card having a speech input circuit for entering speech signals and circuitry for presenting non-speech information; a smart card having a biometric data acquisition circuit for

Art Unit: 2876

acquiring biometric data; a smart card having an array of pressure detectors for determining pressure applied to the card; a smart having two separated parts; a smart card having an authentication circuit for authenticating a transaction; and a smart card having a controllable pattern display for changing pattern respectively to the card validation. The species are independent or distinct because they are different applications of smart card, wherein the smart card has different structures and functions respectively to each application. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
